

## Regular Maintenance:

Vacuum regularly with a soft brush attachment to remove any accumulated dust and dirt.

## Stain Cleaning Solutions:

- 50/50 solution of warm water and bleach (5.25% sodium hydrochloride solution)
  - **Do not use bleach on printed products/panels** unless specifically stated otherwise on manufacturer's product/care and maintenance documentation
- 3% Hydrogen Peroxide
- Aerosol Spray disinfectants, such as Lysol
- If disinfection is not required, spots and stains may be removed using cleaning agents similar to traditional upholstery spot cleaning methods for polyester fabrics with cleaning code "W"
- **IMPORTANT:**
  - **Always wear protective equipment appropriate to the cleaning solution being used and situation (i.e. gloves, respirator/mask, protective eyewear, etc.)!**
  - **Always test cleaning solutions in an inconspicuous area first!**

## Stain Cleaning Steps:

1. **Pat down spills & stains as soon as possible, to prevent spilled substances from being absorbed into the product.**
2. If there is visible soiling and the stain is dry, use a bristle brush to loosen the impurities. Avoid applying excess pressure.
3. Vacuum the area with a soft brush attachment.
4. If the soiling/stain persists, apply appropriate cleaning solution to a clean cloth. Use a hand spray application on the cloth to avoid over-soaking the surface.
5. Using the sprayed cloth, blot (pat) the stain starting from the outer edges and working inward.
6. If needed, get a new cleaning cloth and repeat steps 4 and 5, until there is no further transfer of the impurities to the cloth.
7. Continue cleaning by vacuuming up all remaining moisture and residue with a wet/dry vacuum.
